## Summary

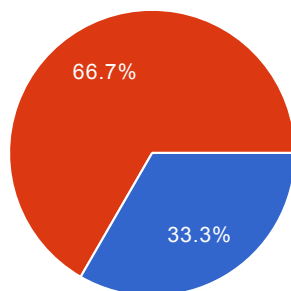

### Demographics

**“Are you the primary person to handle medicines in your family?”**

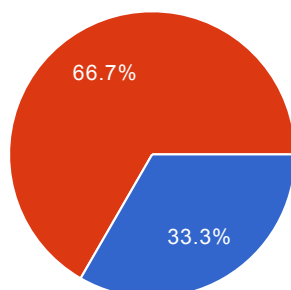

Yes	3	100%
No	0	0%

**How many people?**

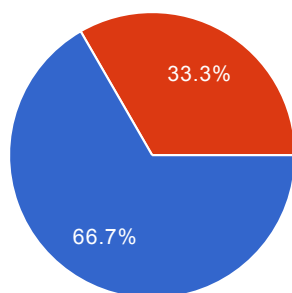

1	1	33.3%
2	2	66.7%
3	0	0%
4	0	0%
5+	0	0%

**“Do you manage medicine for anyone else, like a parent, child, spouse, or significant other?”**

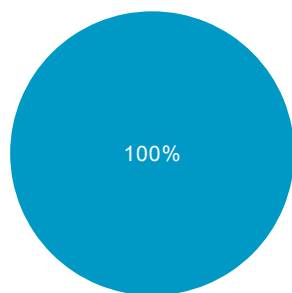

Yes	1	33.3%
No	2	66.7%

## Gender

Male	2	66.7%
Female	1	33.3%

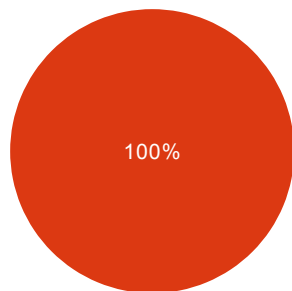

## Age Range

18 – 24	0	0%
25 – 34	0	0%
35 – 44	0	0%
45 – 54	0	0%
55 – 64	0	0%
65+	3	100%

## Monday Screen

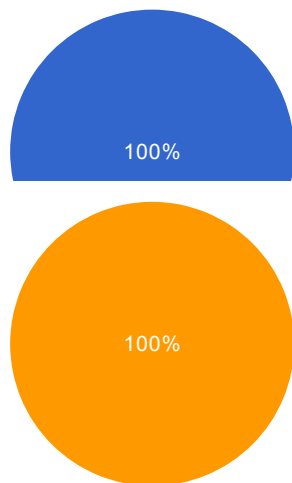

**"Have you ever had one medicine that couldn't be taken with another medicine or certain foods?"**

Yes	0	0%
No	3	100%

**"Did you know that you're not supposed to take Excedrin or Tylenol with alcohol?"**

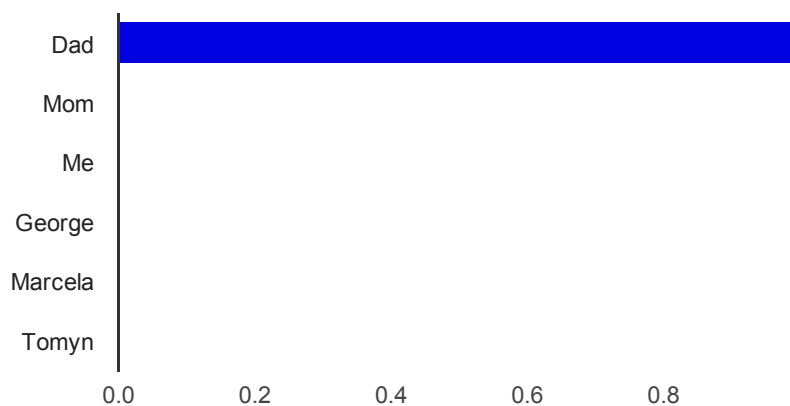

Yes	2	100%
No	0	0%

### sed at least one medication

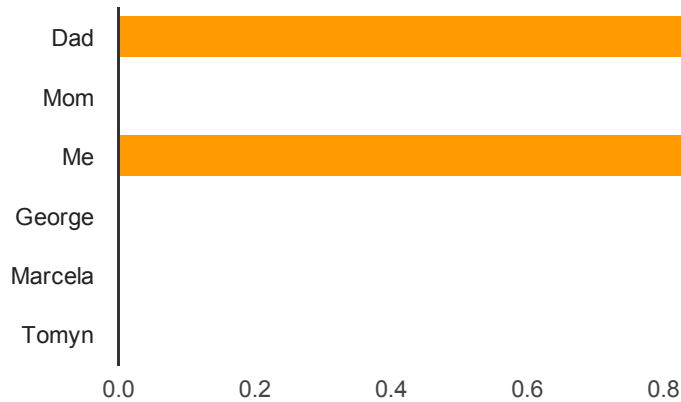

1	0	0%
2	0	0%
3	2	100%
4	0	0%
5	0	0%
6	0	0%

### Who takes medication with lunch?

Dad	1	100%
Mom	0	0%
Me	0	0%
George	0	0%
Marcela	0	0%
Tomy	0	0%

### Who takes medication before they go to bed?

**What else do you notice about this screen, or what other information does it provide for you?**

I'm not sure what it does, or what it represents.

I'm not sure what's on this screen. The check marks and such obscure the pictures underneath. I can tell that it is tracking whether or not you have done some kind of task, but I don't know what that task is. Is the sun for morning and the moon for evening? It seems like it, but I take most of my medications at night, and that section is so much smaller that I wouldn't be able to fit all my medications into that space.

nothing. Sun means "during the day". Stars and moon mean nighttime.

**In your opinion, if you were using that screen to manage the medications in your family, what's missing from this screen?**

I don't know.

(Tester note: She was able to accurately guess what everything did on the page at first guess, but she was very unsure if she was right, and felt wrong.)

What do the symbols mean? Why does it say 9am multiple times, but they are different widths? Does that mean Dad takes three in the morning, but I only take 2? My logic brain, the matching sections should be vertically aligned.

## Profile Screen

**What is the purpose of this page?**

This tracks the medications through the day that I take.

I'm not sure what the pictures are for. I guess this is for tracking my medications that I take. Why is the drug company on there? If this is for tracking my medications I'd rather see a lot of other information instead of the drug company. i don't really care.

Listing his list of medications. Pharmacy. Doctor. Where he gets his medication. The dosage for each medication, and when to take it. Taken by pill or spoon, etc. Allows you to get more information if you don't understand it, or edit the entry. And you can always add new medications to the list.

### **In your opinion, what's missing from the screen?**

When in the AM the medicine should be taken? Needs a set time. Does it need to be taken with food, or should it not be taken with food? Someone else might need to look at it and see if you've doing what you're supposed to be doing. I have a schedule, "with breakfast", "with lunch", "with dinner", or "at bedtime". My brother also had a pill that had to be taken every 4 hours (or else the blood clot would kill him) around the clock. And it had to be right on time. Couldn't be more than 15 minutes ahead or behind. Must be evenly spaced. (A frequency.) If you miss, can you take it early or later, or after a certain number of hours? Needs a range. When adding medicines, you have medicine and manufacturer, but you also need a space for directions to take the medicine.

I would like to know how much to take and when. Also Amoxycilin is not taken with a spoon. The carefully control how much you get, based on weight and age, so you get a very specific dosage in a pill.

I get my medications from different pharmacies, not just one pharmacy. I need to know how long I have to wait until after I take one medicine before I can drink milk. For example, I can't take one medicine with iron for 4 hours. So I use that as a kind of diet pill, since I can drink milk, or eat anything else that might have iron for about 4 hours.

## **Reminder**

### **Do you see a message? What is the purpose of that message?**

This is really good. I would click on that while I had the pill in my mouth, to make sure that I'm recording that I took the pill, not that I'm going to take the pill.

This is good. It tells me what to take and when.

### **What would you do in response to this message?**

Take my pill.

I would click on "Took it".

### **In your opinion, what's missing from this message?**

I don't think anything is missing.

I don't know.

## Add a Medication

### How would you add a new medication for "Dad"?

Press the add new and then i assume you can toggle into each form field.

Click on the Add New button at the bottom of the page.

I would click on the Add New button at the bottom.

### Click the button to add a new medication. Did you see a message? What is the purpose of that message?

A warning that you have two medications that you're not supposed to take at the same time.

Oh, this is good. it's warning me about a potential conflict.

Ah. The conflict between medications is good. Is that going to come up when I enter the medicine? Or when I'm taking the medicine? I'd prefer that it comes up when I enter the medication. When it's time to take it, it's too late. If there's a conflict, when can I take the medication such that it will be alright. Do I need to wait 4 hours? 12 hours?

### What would you do in response to this message?

Call my doctor. When am I supposed to take these pills? How far apart? There's a question of how closely together they are to be taken to affect each other. Be specific.

I would not call my doctor. I always communicate with my pharmacy. They know much better than my doctor which medicines I take, and how they react with each other.

### In your opinion, what's missing from this message?

How long is this alert good for? For example, it may be that Niagra and Amoxycilin can not be taken within 4 hours of each other, but I can take them both as long as I take them further apart. I would also like to see what kinds of reactions other people got. I might see the reaction and say, "I have upset stomach too," or I might look at the reactions and say, "I don't have an upset stomach, so I'm not being affected by this interaction. I might still contact my pharmacy, but I might continue using the drug.

Anybody that's taking drugs that potentially interfere with each other. There should be a start or asterisk on the picture of each person on the first screen to show that they have an interaction warning.

## Back to Monday Screen

### Did you see a message? What is the purpose of that message?

There's a Recall Alert. Dad is involved in this recall.

There's an alert for Dad. Dad is having a bad reaction to a medication.

### What would you do in response to this message?

I would not call my doctor. They track too many patients. I would read more information, ready about the reactions and side effects to see if it affected me, and then maybe call my pharmacist.

Make sure dad isn't taking this anymore, check the symptoms, call the pharmacist, and then call the doctor.

Hit more info, then call doctor to find out what the problem is with the recall. Is it the whole medication? Or just that manufacturer? You can have both types of recall.

### In your opinion, what's missing from this alert?

Which drug companies are involved in this alert?

The person that's responsible. Whoever's controlling the medication. And the person taking the medication. Plus the doctor.

Who's issuing the alert. I hope "More Info" has details about how to check the symptoms experienced that caused the recall, to see if I have it.

## Thank You
